

Transitions of Care

Curriculum: Helping Family Medicine physicians learn the best fit post-acute care setting for patients' needs

May Soliz, MD

Mentors: Janice Benson, MD, Pooja Saigal, MD, Victoria Braund, MD

University of Chicago (NorthShore) Family Medicine Residency Program

Outline

- Background and problem identification
- Needs assessment
- Goals and objectives
- Methods
- Results
- Conclusions, discussion, and future directions

Background

- Post-acute care setting (PACS) is defined as the place patients go following hospitalization for further care.
- Medicare spends approximately \$15-20 billions annually on re-admissions (AHRQ 2015).
- Increasing healthcare costs (for taxpayers and patients), iatrogenic complications (i.e. adverse drug events, delirium, infections, functional decline)

ACGME Milestones for FM

- ACGME Milestone PC-1: Arranges appropriate transitions of care.
- ACGME Milestone SBP-1: Understands that **health care resources and costs impact patients and the health care system.**
- ACGME Milestone SBP-1: Coordinates individual patient care in a way that is sensitive to resource use, efficiency, and effectiveness.
- ACGME Milestone SBP-2: Participates in effective and safe hand-offs and transitions of care
- ACGME Milestone SBP-4: Assumes responsibility for **seamless transitions of care.**
- ACGME Milestone SBP-4: Accepts responsibility for the **coordination of care**, and directs appropriate teams to optimize the health of patients.

Problem Identification

- As more health care professionals are practicing in single settings, many are unfamiliar with the capabilities of PACS which leads to less than optimal outcomes for patients (Coleman 2004).
- No formalized training of U of C (NorthShore) family medicine residents to learn about PACS.

Needs Assessment

- U of C (NorthShore) has 6 residents each PGY.
- 17 residents completed the needs assessment survey.

Where do you learn about different PACS?

- Inpatient service
- Geriatrics rotation
- Talking with PT/OT or Social workers

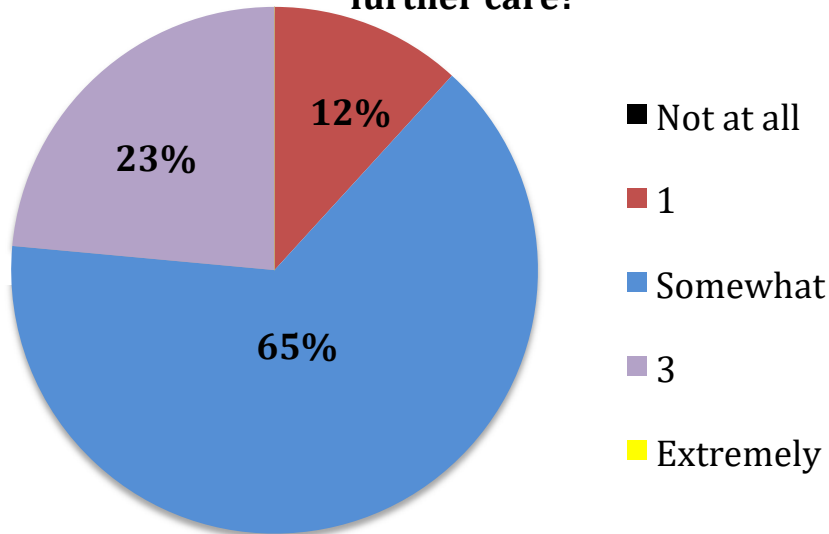

Up to this point, did you have any informal or formal training on different post-acute care settings?

Needs Assessment Cont.

- On the Likert-scale (0 = Not at all, 4 = Extremely)

How CONFIDENT are you that the patient you discharged goes to the best/right location for further care?

How IMPORTANT is it for YOU to learn about the different PACS?

Goals and Objectives

- **Goals:** To familiarize FM residents to various PACS and educate on how to select appropriate discharge location for patients.
- **Objectives:**
 - Name the different types of PACS
 - Discuss insurance coverage/payment
 - Compare the services available
 - Select appropriate discharge locations using cases
 - Understand the importance of the physician role
 - Feel confident in your discharge location selection

Methods

- Of the 17 residents who completed the needs assessment survey, 10 were able to participate in the intervention.
- **Setting:** 1-hour interactive didactic session
 - 5 minute Pre knowledge test
 - 15 minute PPT lecture
 - 30 minute small group case discussions
 - 5 minute Post knowledge test
 - 5 minute Q&A
- Post session survey conducted to assess impact of curriculum on residents' attitudes, confidence, and knowledge.

An Overview of Different Post-Acute Care Settings

	Home, Independent, Senior housing	Assisted/Supportive Living	Nursing home, LTC (Long-term care)	Sub-acute Rehab	Inpatient Rehab	LTAC (Long-term acute care)
Insurance coverage	None. Medicaid, Medicare, commercial for <i>home health</i> .	None. Out of pocket \$4K-\$8K Long-term health care insurance.	Medicaid. Out of pocket >\$5K. Long-term health care insurance.	Medicare - 3 midnight hospital stay in last 30 days - 1-20 days: 100% - 21-100 days: +copay - 101+: none - Out of hospital for >60 days to reset Medicaid, Commercial	Medicare Medicaid Commercial	Medicare Medicaid Commercial
ADL/IADL support	None	Minimal	ADL: Moderate IADL: All	ADL: Moderate IADL: All	ADL: All IADL: All	ADL: All IADL: All
Health-care provider services[¶]	None	None	CNA: 1:6 LPN: 1:30 RN: 1:100 MD: q 1 mo x 3, then q2 mo Subspecialty: Limited	CNA: 1:6 LPN: 1:30 RN: 1:100 MD: q1-4 wk Subspecialty: Limited	CNA: 1:4 LPN/RN: 1:8 MD: 5-7 days/week	CNA: 1:5 RN: 1:8 MD: Daily
Access to therapeutic/diagnostic modalities	Vent: None IV: Outpatient PT/OT/ST: Depends Wound: Depends Resp: DME (i.e. oxygen) Med: None Labs/imaging: none	Vent: None IV: None PT/OT/ST: Minimal Wound: None Resp: None Med: Yes, extra cost Labs/imaging: Outpatient	Vent: None IV: Yes (short term) PT/OT/ST: Maintenance Wound: Yes, simple Resp: Some Med: Yes Labs/imaging: 4-24hrs	Vent: None IV: Yes PT/OT/ST: ≤1hr x 5d/wk Wound: Yes, simple and moderately complex Resp: Some Med: Yes Labs/imaging: 4-24 hrs	Vent: +/- IV: Yes PT/OT/ST: 3hr x 5d/wk Wound: Yes, all Resp: Yes Med: Yes, stat Labs: Yes, stat	Vent: Yes IV: Yes PT/OT/ST: Yes Wound: Yes, all Resp: Yes Med: Yes, stat Labs: Yes, stat

Terminology glossary:

Medicare – Federal health insurance program for people who are ≥65 years old, younger people with disabilities, and people with ESRD (end-stage renal disease).

Medicaid – Health care program that assists low-income individuals for long-term medical or custodial care costs.

ADL (Activities of daily living) – Activities that are needed daily to just live. (i.e. eating, dressing, bathing, transferring, toileting, bladder/bowel control).

IADL (Instrumental activities of daily living) – Activities that are needed to live independently. (Ex: housework, preparing meals, taking medications, managing finances, and using telephone).

CNA – Certified nursing assistant is a person who performs duties assigned by LPN or RN. They help people with bathing, dressing, taking vitals. They DO NOT draw blood or monitor advanced equipment.

LPN – Licensed practical nurse is a person who provides *basic* medical and nursing care such as vitals, insert catheters, discuss health care with patients, helps with dressing and bathing. LPN work under the supervision of RN and doctors.

RN – Registered nurse is a person who can administer medications and treatment to patients, coordinate plans for patient care, perform diagnostic tests and analyze results, and instruct patients on managing illness.

*Hospice – The focus is on comfort care and NOT on prolonging life. The goal is to alleviate suffering and die w/ dignity as the natural disease process takes over. Both Medicare and Medicaid cover this. No one is turned away for inability to pay. Social workers, nurses, chaplain are on-call. Nurses are available 24/7 and MD availability varies. It can occur at any setting EXCEPT inpatient rehab, LTAC, and sub-acute rehab.

**CCRC – Continuing care retirement community is a senior living model that combines 4 types of retirement living at a single location (includes independent living, assisted living, memory support and skilled nursing.) They cost approximately \$700,000 (not including monthly fees).

¶ These are estimates on average and may vary from facility to facility.

Results

Percentage of responders familiar with the different PACS

>90% of residents were familiar with all of the various PACS.

BEFORE THE SESSION: The following statements asks you about your BELIEFS and ATTITUDES on learning about PACS.

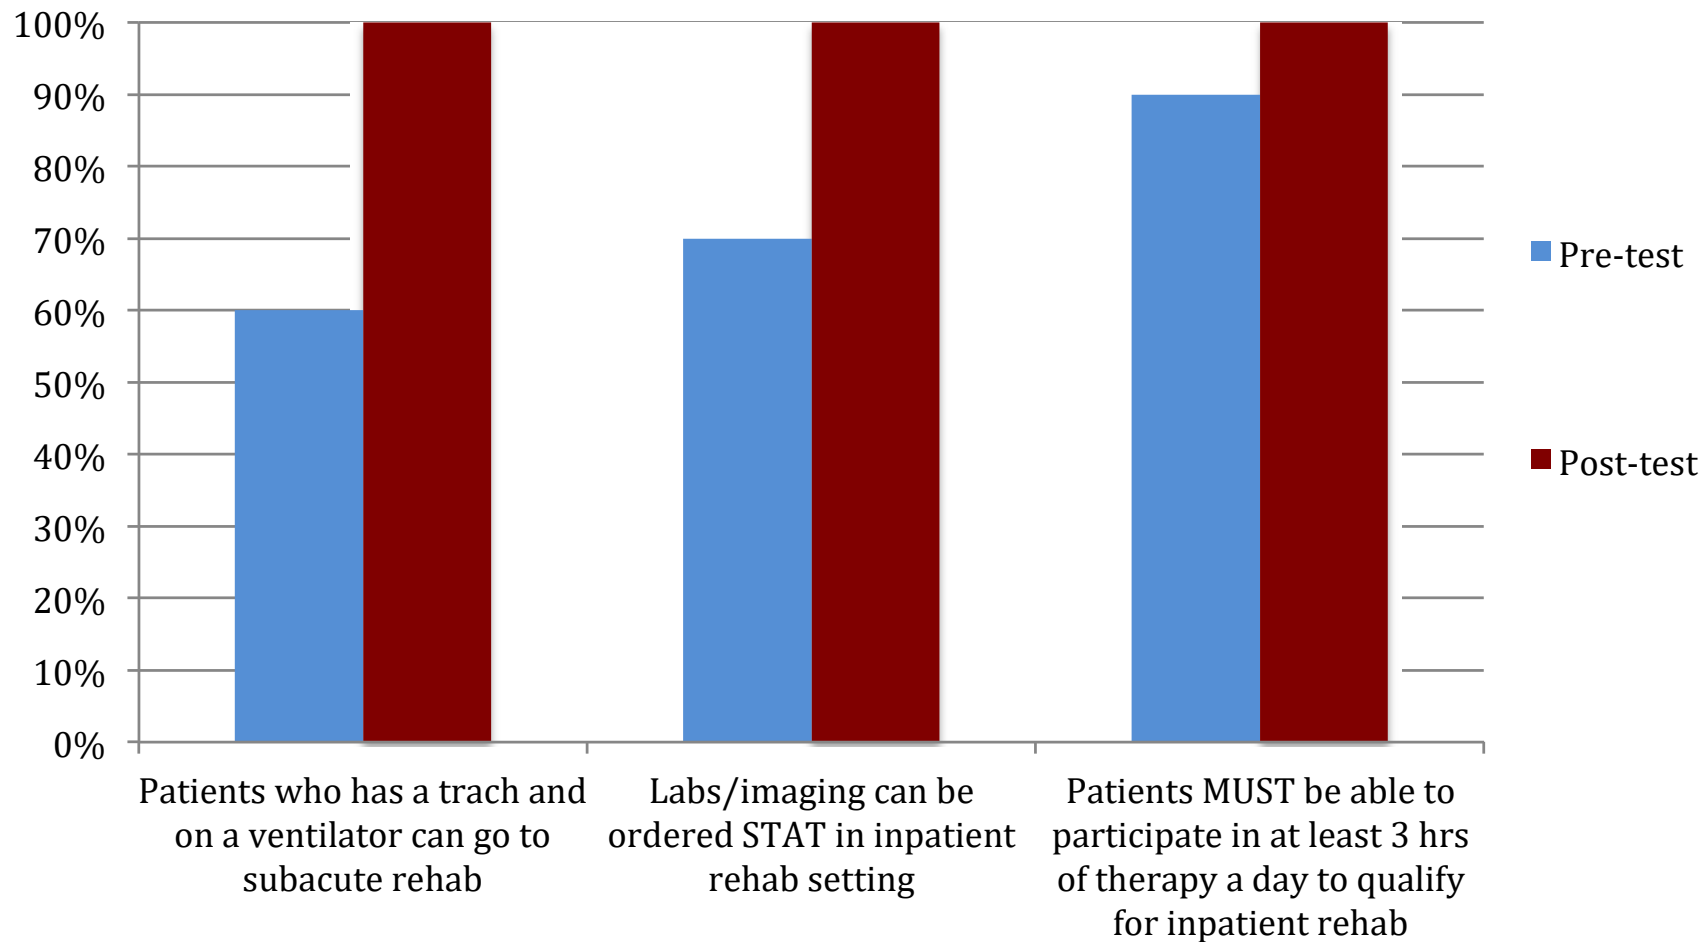

AFTER THE SESSION: The following statements asks you about your BELIEFS and ATTITUDES on learning about PACS.

100% of residents felt they plan an “important” or “extremely important” role in deciding where patients are discharged after hospitalization.

Results Cont.

Residents performed 100% on the TRUE/FALSE knowledge quiz at the end of the session.

Comments from residents:

- “I had a question about PACS on my step 3 and your presentation helped me answer the question.”
- “I love the grid handout.”
- “We can use this [handout] on our inpatient service.”
- “The handout is a useful tool.”

Conclusions and Discussion

- Prior to this curriculum, FM residents at U of C (NorthShore) did not have formal training on the services, coverage, and capabilities of the different PACS.
- Participants in the study found the curriculum valuable to their learning.
- FM residents at U of C (NorthShore) find it important to learn about the different PACS.
- An interactive session (didactic & small group case discussions) is an effective method to train residents about different PACS.

Limitations & Future Directions

- Study size small due to residency program size.
- Unclear if results can be replicated at other Family Medicine residency training programs.
- It will be interesting to study the impact of this curriculum on patient outcome, satisfaction with care, and re-admission rates.
- Future studies can look at how this curriculum impact comfort, knowledge, and decision to pursue geriatric fellowship post FM residency.
- This curriculum can be adapted for RNs, PT/OT, case workers, social workers, and patients/families.
